

Our topic this term was buildings. During our topic lessons, we looked at how buildings and patterns within the buildings evolved over time.

The first era we studied was The Stone Age, we looked at the patterns used in that period of time (which were all straight lines with different shades of earthy colours)

In our Design and Technology lesson, we decided to create tiles based on the patterns found in The Stone Age. We started by investigating different patterns and then designed our tiles.

Later on, we took a tile, which was 15cm by 15cm and drew on our design. Using PVA glue and strings, we recreated the design. Once the string was firmly stuck on the cardboard, we painted it using earthy colours. Finally, we evaluated our outcome against our initial design.
